Phishing Security Awareness Training Simulation Report

Cybersecurity Audit Project – Employee Vigilance Assessment

Organisation: Adetech

Date: 12th April 2026

Prepared By: Adeolu O. Ogunbiyi (Cybersecurity Analyst)

1 · Overview

A phishing simulation was carried out across the Audit (40 employees), Customer Service (50 employees), and IT (45 employees) departments to assess the impact of previous phishing awareness training. The exercise mimicked a credential-harvesting campaign by using a replicated login portal. Results indicated encouraging progress in employee awareness and vigilance:

- Click rates were relatively low (14–20%),
- Credential submissions were minimal (0–1 total),
- Reporting rates increased significantly, especially in Customer Service and IT.

These findings show measurable improvement in security culture, with fewer risky behaviors and stronger reporting habits.

2 · Objectives

- Lower link-click rate among targeted employees.
- Increase phishing incident reports submitted to the security team.
- Reduce credential submission attempts on the phishing landing page.

3 · Compliance Drivers

- ISO 27001 A.7.2.2 (Awareness, Education & Training): This simulation evidence employee awareness testing and supports continuous improvement.
- Internal Risk Register: Addresses phishing risks identified as a top threat vector.

4 · Tooling

- **zphisher** – generated the phishing site and captured interaction data. Below are the screenshots from Kali Linus system.

```
┌──(adexkali㉿kali)-[~]

- Localhost – optional port-forwarding for internal access during testing.
- Google Sheets – stored key performance indicators.

5 · Simulation Scenario

A crafted invoice-reminder email requested payment for WordPress services. The message included a link that directed recipients to a clone login page hosted with zphisher

5.1 · Phishing Email Template

Hi Alex,

I hope this message finds you well. I am writing to remind you that the payment for the WordPress services provided on your domain cyberttech.com is now due. As per our agreement, the total amount of $4000 was to be settled by 29TH June, 2025.

We value our relationship and are committed to providing you with the best service possible. If you have already made the payment, please disregard this message. Otherwise, I kindly ask you to arrange for the payment at your earliest convenience.

Please click on this link if you have any questions or need further details regarding the invoice.

Thank you for your attention to this matter, and I look forward to continuing our successful collaboration.

Warm regards,

Wordpress team.

6 · Metrics

Before training, phishing simulations showed **higher click rates, higher credential submissions, and lower reporting**.

Department	**Employees Tested**	**Link Clicks**	**Credential Submissions**	**Phishing Reports**	**Click Rate (%)**	**Submission Rate (%)**	**Report Rate (%)**
Audit	40	15	10	3	33.3%	13.3%	10.0%
Customer Service	50	20	12	5	37.5%	15.0%	12.5%
IT	45	15	8	4	34.3%	8.6%	11.4%

Post-training results show clear **positive improvement**:

- Click rate dropped from ~35% → ~15–20%.
- Credential submissions dropped from 13% → almost 0%.
- Report rate increased from ~10–12% → 33–47%.

Department	Employees Tested	Link Clicks	Credential Submissions	Phishing Reports	Click Rate (%)	Submission Rate (%)	Report Rate (%)
Audit	40	5	1	10	16.7%	3.3%	33.3%
Customer Service	50	8	0	19	20.0%	0.0%	47.5%
IT	45	5	0	14	14.3%	0.0%	40.0%

7 · Analysis

- Audit: Moderate click rate (16.7%) with 1 credential submitted. Improvement is needed in recognizing malicious login requests.
- Customer Service: Higher click rate (20%), but zero credentials submitted — showing employees are stopping before full compromise. Reporting rate (47.5%) was the highest across all teams.
- IT: Lowest click rate (14.3%) with strong reporting (40%), suggesting high awareness levels.

8 · Recommendations

- Targeted Follow-Up Training for Audit team on credential phishing indicators.
- Reinforcement Sessions for all employees highlighting the importance of reporting suspected emails.
- Quarterly Simulations to measure sustained improvement and meet ISO 27001 awareness control.
- Gamified Awareness Programs (leaderboards, recognition for reporting) to encourage higher vigilance.

9 · Conclusion

The phishing simulation demonstrates that awareness training is delivering measurable results. Fewer credential submissions and higher reporting rates highlight clear progress toward a stronger security culture. With ongoing reinforcement, the organization can continue to minimize phishing risk and uphold ISO 27001 compliance.
